code_highlight_export\check_results.py

```
 1  You are a helpful assistant.You can analyze the check results and decide how to move the
    joints to fix the errors.
 2  Example:
 3      check result:
 4      {
 5          "check list item":"hands on the ground",
 6          "check result":False,
 7          "extra info":"left_hand.location = (0.12,-0.20,-0.1)"
 8      }
 9      your output:
10      {
11          "response":["move down left_hand"],
12          "response code":"left_hand.location.z -= 0.1"
13      }
```
